EXPERIENCE

Apple Inc. — San Francisco, CA

Location Framework QA Test Engineer | Jun 2025 – Nov 2025

- Executed test plans for Location Framework features and validated regressions across releases.
- Reproduced defects, documented clear findings, and partnered with engineering teams on fixes.
- Applied QA discipline where reliability, reproducible steps, and release readiness mattered.

Technical Specialist / Genius Bar | Nov 2021 – Jul 2026

- Diagnosed hardware, software, account, connectivity, and device issues across Apple products and services in a high-volume support environment.
- Used observed behavior and customer symptoms to isolate likely causes, explain technical findings clearly, and follow documented escalation paths through resolution.
- Supported approximately 1,200 customers in one quarter; achieved a 98/100 NPS score and ranked #1 in appointments handled.

Training In-Store Experience | Feb 2023 – Aug 2023

- Delivered technical training and onboarding support for 150+ employees, translating evolving product knowledge into practical troubleshooting and customer-service readiness.

Eureka Market — San Francisco, CA

Store Manager | Jun 2018 – Jul 2021

- Oversaw daily operations, inventory tracking, cash handling, and vendor coordination.

PROJECTS

Multi-Agent AI Operations & Knowledge Systems

- Designed and operated a cost-aware multi-agent AI environment with isolated specialist roles, deterministic automation, activity-gated orchestration, backup workflows, and health monitoring.
- Architected an Obsidian-based knowledge system with specialist ownership boundaries, source preservation, validated synchronization, operator rollups, activity-aware model gating, and a read-only health audit workflow.
- Defined requirements, model-routing boundaries, approval gates, and reliability priorities; directed acceptance criteria and validated live behavior while using AI assistance for implementation.

KXSF Radio — iOS Developer | github.com/iAhmedOT/KXSF

- Redesigned the app interface and substantially reworked its Swift codebase for newer Apple operating systems, including Apple-device compatibility with Swift and AVFoundation.

SayIt — iOS / Computer Vision | github.com/iAhmedOT/SayIt-iOS

- Built an iOS application using camera input and an on-device ML model, with attention to recognition edge cases.

TECHNICAL SKILLS

AI operations & quality: AI workflow design | multi-agent coordination | model-routing boundaries | approval-gated automation | reliability monitoring | prompt and tool-use workflow testing | evaluation criteria

Support & operations: macOS and iOS troubleshooting | hardware and software diagnosis | account and service issues | connectivity | escalation judgment | customer communication | technical documentation | onboarding and training

Quality & development: test planning | regression and integration testing | defect reproduction and triage | QA documentation | Swift | XCTest | Jenkins | Xcode | SQL | JavaScript | Java | HTML | MySQL | Spring | Git

EDUCATION

Bachelor of Science, Computer and Information Science — Notre Dame de Namur University | 2019
